

Neil M. Maher is a professor of history in the Federated History Department at the New Jersey Institute of Technology and Rutgers University at Newark, where he teaches American environmental and political history. He has published articles in academic journals including *Social History*, *Environmental History*, the *Western Historical Quarterly*, and most recently, *Modern American History*. His most recent book, *Apollo in the Age of Aquarius* (Harvard University Press), examines the interrelationship between the space race and the grassroots political struggles of the 1960s era, including those involving the civil rights, anti-Vietnam war, environmental, feminist, counterculture, and conservative movements. The book was named a Choice Outstanding Academic Title (2017) and a Bloomberg View Must Read Book (2017), and recently received the Eugene M. Emme best book award from the American Astronautical Society (2017).
